

Those with health have hope.

Promote healthy living.

Public Health & Health Sciences

Learn the science of public health and health behavior. Design health programs to improve the health and well-being among individuals and communities everywhere. Our program will prepare you to be a change maker across careers in public health, health education, community health, worksite health, global health and other health-related professions.

EXPERIENCES OFFERED

Through practical application built into the curriculum, you will enjoy hands-on experience and networking opportunities that can lead to successful job placement or graduate school admission.

EMPHASIS AREA COMMUNITY HEALTH

This emphasis area is designed to develop rich foundational and applied knowledge in the area of health promotion, community health, and public health. You may select professional electives and special topics that align with your public health passions to accompany practical application and coursework in program planning and evaluation.

GRADUATE OUTCOMES

Graduates are prepared for employment or graduate school in public health, community health or allied health professions such as physical therapy or other medical related professions. Graduates may work in public health settings including public health departments, environmental health, hospitals, health care management and organizations at the state, national and international levels.

EMPHASIS AREA HEALTH SCIENCE STUDIES

This emphasis area will prepare you for graduate education in medicine, nursing, physical therapy, occupational therapy, athletic training and other health related professions.
